

Hospital SQL Data Analysis

SQL Queries & Business Analysis

Prepared by: Abhishek Aryan

Project Overview

This project analyzes hospital operational data using SQL to generate business insights related to patients, departments, hospitals, doctors, and medical expenses.

Dataset Includes

Hospital Name, Department, Location, Admission Date, Discharge Date, Doctors Count, Patients Count, Medical Expenses.

SQL Concepts Used

SELECT, WHERE, GROUP BY, ORDER BY, Aggregate Functions, LIMIT, Date Functions.

Key Business Insights

- Urology treated the highest number of patients.
- Cardiology treated the fewest patients.
- Healing Touch recorded the highest medical expenses.
- Wellness Clinic had the highest average number of doctors.
- Jaipur treated the highest number of patients among cities.
- September recorded the highest monthly medical expenses.

Conclusion

SQL enables efficient analysis of hospital operations and supports data-driven decision-making through aggregation, filtering, and trend analysis.
